Internship:
Cloud Computing Internship

Organization:
CodeOrbit Tech

Date:
30 October 2026

1. OBJECTIVE

The objective of this task is to set up and use a cloud storage service, upload and organize files, manage stored files, and understand basic access permissions and file management.

2. INTRODUCTION

Cloud storage allows users to store files and data on remote servers and access them through the internet. It provides a convenient way to store, organize, manage, and share files.

In this task, Google Drive was used as the cloud storage service. A dedicated folder was created, sample files were uploaded, files were organized into folders, and basic sharing permissions were configured.

3. TOOLS AND TECHNOLOGIES

- Google Drive
- Google Account
- Web Browser
- Cloud Storage
- File and Folder Management

4. CREATING A CLOUD STORAGE FOLDER

A cloud storage folder named CodeOrbit_Task3_Cloud_Storage was created using Google Drive. The folder provides a central location for storing and managing files in an organized manner.

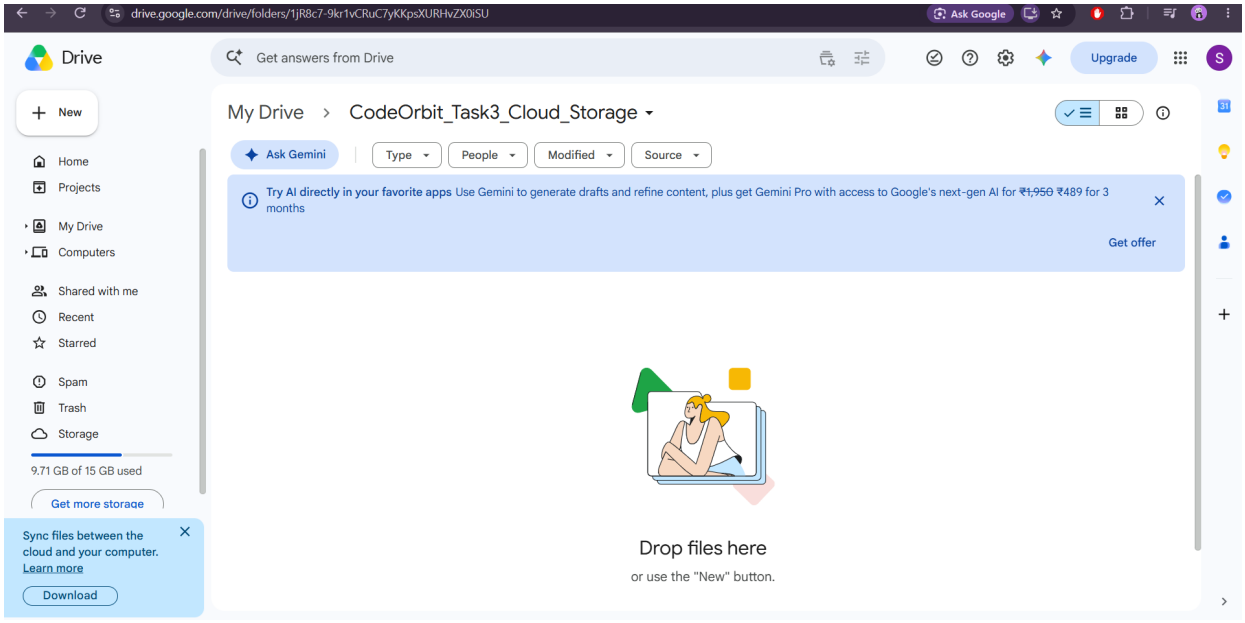

Figure 1: Google Drive cloud storage folder setup

5. UPLOADING FILES

After creating the cloud storage folder, three sample files were uploaded using the file upload option in Google Drive. The uploaded files were stored in the cloud storage folder and could be accessed through the Google Drive interface.

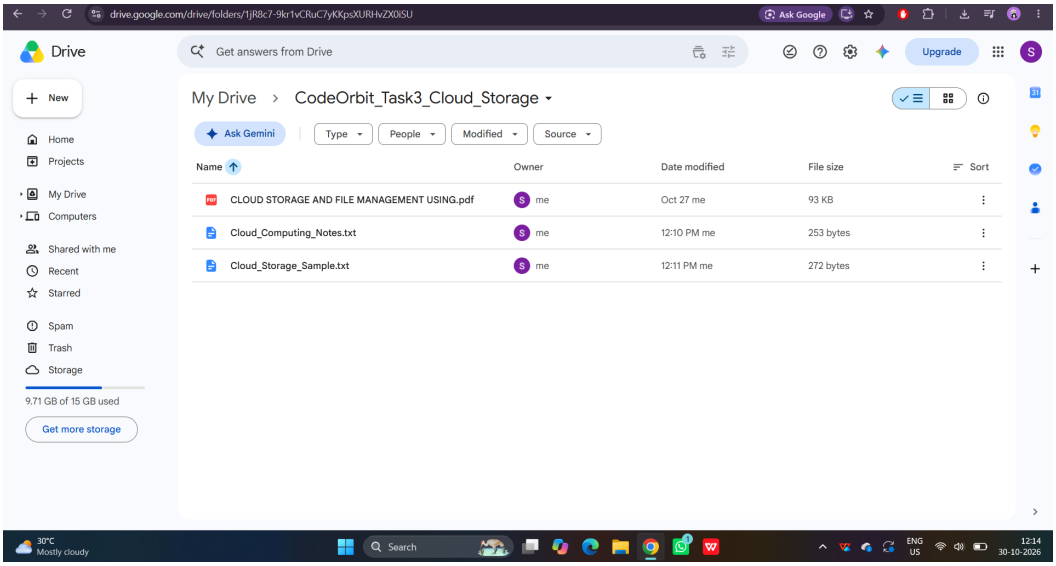

Figure 2: Files uploaded to Google Drive

6. ORGANIZING FILES

A separate folder named Documents was created inside the main cloud storage folder. One uploaded file was moved into the Documents folder to demonstrate basic file and folder organization. This helps maintain a structured arrangement of files in cloud storage.

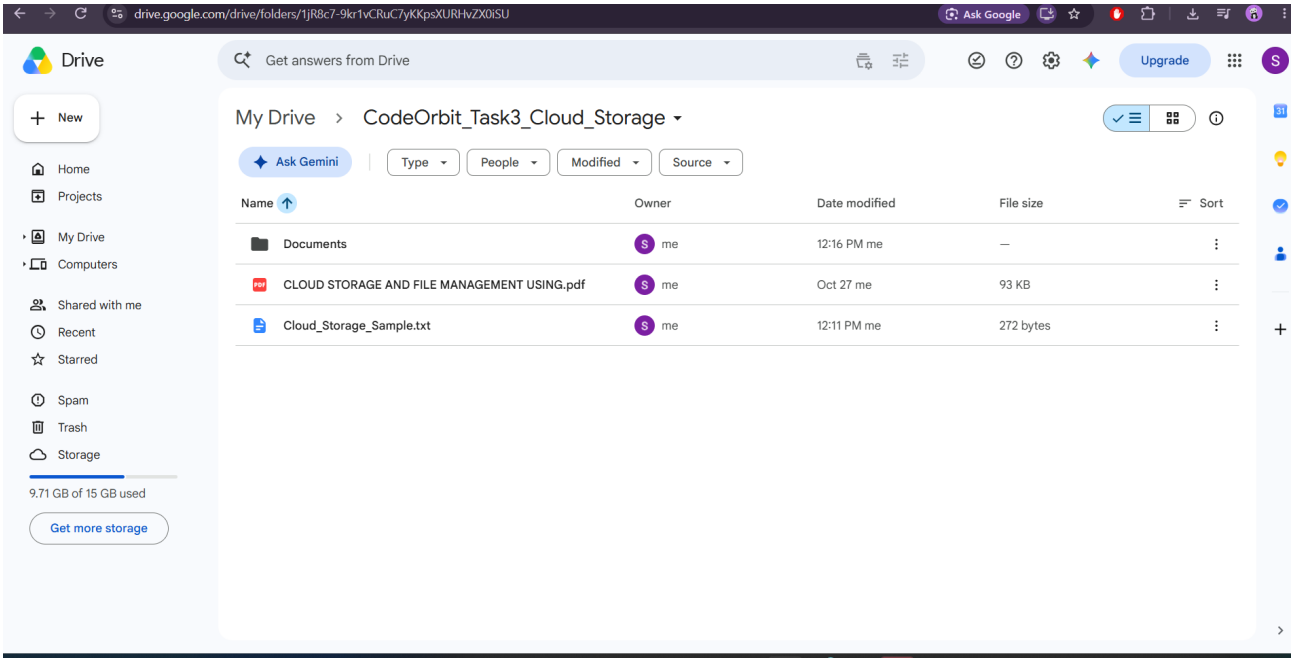

Figure 3: Organizing files into a folder in Google Drive

7. MANAGING FILES

Google Drive provides options to view, open, move, download, rename, share, and manage stored files. The uploaded files were viewed and organized using the available file management options.

8. BASIC ACCESS PERMISSIONS

Basic access permissions were configured for the cloud storage folder. The sharing setting was configured as Anyone with the link – Viewer. This allows people with the link to view the folder without giving them editing permission.

This demonstrates how access to files and folders can be controlled using cloud storage sharing permissions.

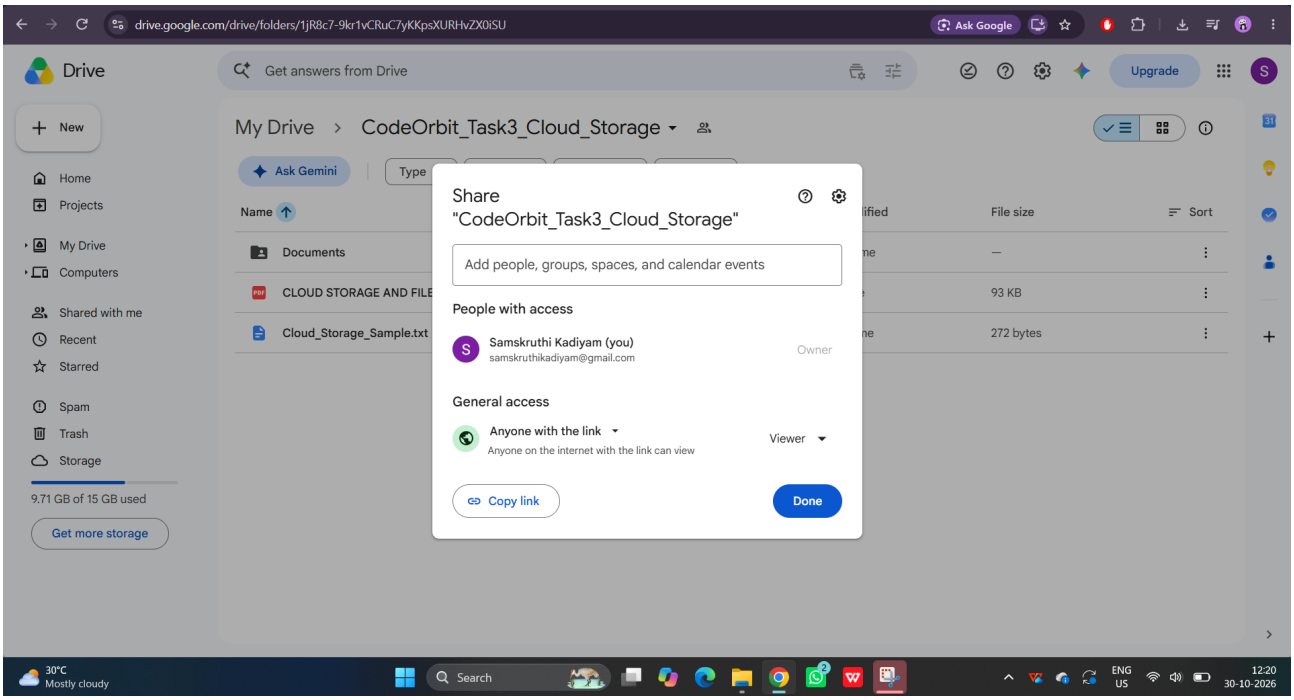

Figure 4: Basic access permission configured in Google Drive

9. RESULT

The cloud storage folder was successfully created in Google Drive. Three sample files were uploaded and organized using a separate Documents folder. The files were managed using the available Google Drive options, and basic access permissions were configured successfully.

10. CONCLUSION

This task provided practical experience with cloud storage and file management using Google Drive. The activity demonstrated how files can be uploaded, organized, managed, and shared using cloud-based storage. It also helped in understanding basic file organization and access permissions in a cloud storage environment.

11. FINAL FOLDER STRUCTURE

The final folder structure demonstrates the organized storage of files and the Documents subfolder created during the practical activity.
